**Pay Per Cloud® announces the addition of VaultScape™ Online Backup to its already successful suite of cloud offerings**

Pay Per Cloud, a leading provider of Cloud Hosting and Managed Services, announced today that it is adding VaultScape Online Backup to its cloud offerings. VaultScape is a service that allows companies the ability to perform reliable backups over the internet to secure off-site backup servers instead of vulnerable on-site tapes.

With the dramatic increase in digital data, companies large and small are dealing with the every growing risk associated with losing their critical business data. By adding VaultScape to its product line, Pay Per Cloud can now provide their SMB customers and partners a solution to this problem at a cost that is dramatically lower than other onsite backup solutions.

The company provides Backup solutions to address both Workstation and Server backup needs and cover multiple operating systems including Windows, Windows Server, Linux and Mac OSX.

With some of the lowest pricing in the industry, pricing plans can be either based on monthly or annual schedules with annual plans providing the deepest discounts.

PayPerCloud EVP of Business Development, Tony Underwood said, “We are very excited about this new offering. Our customers and partners have been asking for a backup solution to complement our other hosting and managed service offerings, and now it’s here and at an unbelievable price point.

Backup is a necessity for every company and the loss of critical digital data is every company’s worst nightmare. That’s why it’s so critical to ensure you have a good backup strategy; one that addresses your on-premise data as well as your remote laptops and mobile devices. VaultScape Online backup allows customers a hassle free way to ensure data is backed up to a secure off-site location”
